

Bridge Community Bank's Remote Deposit

*Proven Technology and Service -
used by Bridge Community Bank business customers since October 2005*

Bring the teller window to your desktop

Scan checks at your own office location(s) using software and hardware provided by Bridge Community Bank.

The scanned check images are transmitted to Bridge Community Bank for deposit.

Bridge Community Bank receives and processes the items for collection.

Eliminate the daily trip to the bank

By eliminating the physical transport of checks, you accelerate access to cash with next business day availability and shrink expenses for couriers and overnight mail. Save time and money in three easy steps.

Take back the “float”

One of the most important benefits Bridge Community Bank's Remote Deposit provides is: *faster access to your money*. By removing physical transportation from the first part of the deposit process, Bridge Community Bank's Remote Deposit shortens the lifecycle of incoming payments and extends your business day.

Reduce account maintenance fees

Since images of the incoming checks are transmitted directly to your bank, it may not be necessary to keep separate depository accounts in various locations, in turn, enabling you to reduce account maintenance fees. All you need is a personal computer with an Internet connection and a scanner provided by Bridge Community Bank.
